| CDATDUPL_DB     | mcc_mnc                                            | 195         | mssql_dump_cdatdupl | MCC_MNC                                            |
| CDATDUPL_DB     | mnc_codes                                          | 340         | mssql_dump_cdatdupl | MNC_CODES                                          |
| CDATDUPL_DB     | mo_image_table                                     | 2,514       | mssql_dump_cdatdupl | MO_IMAGE_TABLE                                     |

Total: 29 tables completed.

## 2. In Progress

None — all planned dump migrations finished.

## 3. Pending — No Source Identified (Team Input Required)

| Database    | Table               | Issue / Action Required                                            |
|-------------|---------------------|--------------------------------------------------------------------|
| CDATDUPL_DB | ndps_abstract_1     | No MSSQL source found in any of the 4 dumps — ask team             |
| CDATDUPL_DB | rowdy_sheeter_data1 | No MSSQL source found (different from rowdy_sheeter_complete_data) |
| CDATDUPL_DB | suspect_image_table | No MSSQL source found in any of the 4 dumps — ask team             |

## 4. Pending — Storage Blocked (Large Tables)

| Database    | Table                    | Size                  | MSSQL Source       | Note                                          |
|-------------|--------------------------|-----------------------|--------------------|-----------------------------------------------|
| CDATDUPL_DB | cdatpcsuspect (full CDR) | ~1.05B rows / ~480 GB | HYD_UNIT_CDAT      | Full call records — not in 4 dumps. HYD_UNIT_ |
| CDATDUPL_DB | address_other_state      | 1.9 TB                | address_db (MSSQL) | Needs ~2 TB free space                        |
| CDATDUPL_DB | cdataddress              | 195 GB                | address_db (MSSQL) | Needs ~200 GB free space                      |

## 5. Why HYD\_UNIT PCSUSpect (Full CDR) Is Missing

- cdatpcsuspect in Postgres currently has only 998 rows — copied from mssql\_dump\_cdatdupl (CDATDUPL2 backup).
- That dump holds a small suspect/sample table, NOT the full Call Detail Record (CDR) data.
- Full CDR call logs live in MSSQL database HYD\_UNIT\_CDAT (~1.05 billion rows, ~222 GB on disk).
- The separate backup HYD\_UNIT\_CDATPCSUSPECT\_22042026.BAK was never restored as mssql\_dump\_cdr.
- Full cdatpcsuspect migration was intentionally deferred: Postgres needs ~430 GB but /mnt/storage1 had ~350 GB free.
- To migrate later: copy from HYD\_UNIT\_CDAT using scripts/migrate\_cdr.sh or migrate\_copy.py cdr job.

## 6. Summary

| Status            | Count | Details                             |
|-------------------|-------|-------------------------------------|
| ■ Completed       | 29    | Data copied and verified            |
| ■ In Progress     | 0     | None                                |
| ■ Missing Source  | 3     | Ask team for source dump            |
| ■ Storage Blocked | 3     | Full cdatpcsuspect + address tables |
